

CIVIL CONSTRUCTION | CONSTRUCTION MANAGEMENT

Benang Contractors is proud to contribute our expertise, knowledge and innovative approach to creating a functional end result that is nothing short of spectacular.

Civil engineers design the physical world that makes up our towns and cities. This is a significant, multifaceted sector which provides solutions, safety and social benefits for contemporary and connected living. Essentially, civil engineering creates the technical building blocks of our society. Our civil engineering capabilities include:

- Road widening schemes
- Road maintenance
- Environmental improvement schemes
- Multi-utility infrastructure projects
- Waste and recycling facilities
- Street furniture installation

The reason why we stand apart from others is due to the fact that our team takes a driven approach to all civil engineering projects. Collaborating with us guarantees you a thinking partner - one who will question plans and propose effective and affordable alternatives - often saving you considerable time and money in the process.

We listen carefully so we truly understand your needs before proposing solutions. And this collaborative approach runs through every facet of our work. We keep you informed so you can see the results of our efforts and easily provide feedback at any point during the process.

From pit and pipe installations to limited access trenching, we have the machinery and experience

to deliver a wide range of installs using either open cut or trenchless technology methods.

TRENCHLESS TECHNOLOGY

Grundomat Bore

Grundomat pneumatic piercing tools (compressed air driven) have been providing accurate horizontal bores beneath roads, railways and landscaping across Australia for nearly 45 years. Water, gas, sewer and electrical industries have all benefited from this trenchless technology.

MULTI-UTILITY SOLUTIONS

The multi-utility package we offer fields a wide spectrum of infrastructure engineering services for your development. Our core service solutions are designed as a simple, turn key and cost-effective package, encompassing testing and commissioning in electricity, telecoms, gas and fibre for developers. Our multi-utility solutions include:

- Site infrastructure design
- Meter installations
- New service connections
- Project management and on-site coordination
- Testing and commissioning
- Asset adoption management/liaison

Testing and Commissioning

A strong, robust commissioning partner is essential to conclude the test and inspection paperwork at handover stage of the site into its operational stage. We ensure the installation is functioning as per the design specification via a comprehensive testing and inspection process.
